IDENTIFIERS Integrated Postsecondary Education Data System

ABSTRACT

The report presents preliminary data on student enrollment at colleges and universities taken from the "Fall Enrollment" survey, part of the Integrated Postsecondary Education Data System. The telephone survey collected key enrollment, degree completion, and finance data from a nationwide sample of 642 institutions of higher education representing the more than 3,600 such institutions in operation in 1989. Among other findings, estimates from the Survey indicate that: (1) fall enrollment in colleges and universities increased almost 3.5% over fall 1988; (2) total awards of associate and higher degrees rose nearly 2% in academic year 1988-89 with women accounting for almost all of the increase; (3) current funds revenues and expenditures increased 7.2% and 6.4% respectively, in fiscal year 1988-89. Data are detailed in both narrative and tabular form for the areas of enrollment, completions (undergraduate and postbaccalaureate degrees), and finance. Survey methodology is also addressed. The 11 tables detail findings by such variables as sex, attendance status, level and control of institution, and fiscal years. (DB)

Total enrollment at institutions of higher education in the United States reached a record high of 13.5 million students in fall 1989, according to the "Early Estimates" survey conducted by the National Center for Education Statistics (NCES). Estimates from the survey indicate that:

- Fall enrollment in colleges and universities increased almost 3 1/2 percent over fall 1988.
- Total awards of associate and higher degrees rose nearly 2 percent in academic year 1988-89. Women accounted for almost all of the increase nationally.
- Current funds revenues and expenditures increased 7 percent and 6 percent, respectively, in fiscal year 1988-89.

The "Early Estimates" survey is part of the Integrated Postsecondary Education Data System (IPEDS). The survey, conducted by telephone, collected key enrollment, completions, and finance data from a nationwide sample of 642 institutions of higher education, representing the more than 3,600 such institutions in operation in 1989.¹ The data and findings in this report are *early estimates* and subject to sampling errors. Actual data for the universe of higher education institutions will be available in the fall of 1990. (See the Survey Methodology for more information.)

Enrollment

Enrollment at institutions of higher education in the United States reached an all-time high of 13.5 million this fall--an increase of 3.4 percent over fall 1988 (table 1). The net increase and the percentage increase in enrollment over the previous fall term were the largest since fall 1980, when enrollment rose 4.6 percent over fall 1979 enrollment. Figure 1 and table 4 provide trend data on enrollment since 1970.

The growth in enrollment was somewhat higher for women (3.8 percent) than for men (2.9 percent). For the second year in a row, women outnumbered men on the nation's campuses by more than one million students and maintained their 54 percent share of the total enrollment. Full-time and part-time attendance showed increases of about 3 percent each over the previous year. Undergraduate enrollment rose almost 4 percent, accounting for nearly all of the enrollment growth at institutions of higher learning this fall.

Public 2-year institutions captured the major share of the enrollment increase, with attendance at these schools up 6 percent over fall 1988. Large increases in full-time and part-time enrollment of both sexes contributed to the rise. Four-year institutions experienced slower growth (2.3 percent) than 2-year institutions (5.3 percent), with most of the 4-year growth in the public sector.

¹The "Early Estimates" survey collected similar data on a nationwide sample of "other postsecondary" institutions. A survey report providing early estimates for all postsecondary institutions combined (about 11,500 in operation in 1989) is forthcoming from NCES.

Postbaccalaureate degrees

Master's degrees showed the largest percentage increase of all degrees awarded--up an estimated 3 percent and totaling 308,000 (table 2). Master's degrees awarded to women accounted for most of the increase, although men's awards rose significantly at public institutions. Master's degrees are now on a steady upswing after several years of decline. The total output of doctoral degrees was unchanged nationally from a year ago, although the number of these awards increased significantly among women. All of the increase in women's doctoral awards occurred at public institutions. First-professional degrees showed no significant total change, but the number of these degrees awarded to men showed a significant drop approaching 3 percent, all of it at private institutions. First-professional degrees peaked in 1985. Figures 4, 5, and 6 and tables 7, 8, and 9 provide trend data on master's, doctor's, and first-professional degrees since 1970.

Finance

The current funds revenues of institutions of higher education reached an estimated \$128 billion in fiscal year 1989, and current funds expenditures and transfers totaled \$126 billion (table 3). These increases represented changes of 7.2 percent in revenues and 6.4 percent in expenditures over the previous year. Four-year and 2-year institutions showed similar increases of about 7 percent in revenues and around 6 percent in expenditures. Private nonprofit 4-year institutions showed the largest increase in revenues and in expenditures of any sector. Figure 7 and Table 10 provide trend data on higher education finance since 1970.

Survey Methodology

The 1989 data are based on responses from the 642 institutions on the Early Estimates Panel, a stratified random sample representative of the universe of 3,662 institutions of higher education in the United States in academic year 1988-89. Selected data items from the Integrated Postsecondary Education Data System (IPEDS) "Fall Enrollment," "Completions," and "Finance" survey forms were requested by telephone from the Early Estimates Representative of each institution in the sample between mid-October and mid-November 1989. The data were edited in light of previous years' survey responses, where available. The largest discrepancies were resolved with reporting institutions.

The overall response rate for the 1989 "Early Estimates" survey was 98 percent. Weighted response rates for the three survey components were: 1) Fall enrollment, 97 percent, 2) Completions, 96 percent, and 3) Finance, 91 percent. The sample weights were adjusted to account for nonresponse. The sample data were then weighted to national estimates using ratio estimation based on fall 1988 universe data for the "Fall Enrollment" survey and academic year 1987-88 universe data for the "Completions" survey. Since the fiscal year 1987-88 (FY 1988) universe data for the "Finance" survey were not complete, the ratio estimate for the FY 1989 Finance estimates was based on the FY 1987 universe data.

Postbaccalaureate degrees

Master's degrees showed the largest percentage increase of all degrees awarded--up an estimated 3 percent and totaling 308,000 (table 2). Master's degrees awarded to women accounted for most of the increase, although men's awards rose significantly at public institutions. Master's degrees are now on a steady upswing after several years of decline. The total output of doctoral degrees was unchanged nationally from a year ago, although the number of these awards increased significantly among women. All of the increase in women's doctoral awards occurred at public institutions. First-professional degrees showed no significant total change, but the number of these degrees awarded to men showed a significant drop approaching 3 percent, all of it at private institutions. First-professional degrees peaked in 1985. Figures 4, 5, and 6 and tables 7, 8, and 9 provide trend data on master's, doctor's, and first-professional degrees since 1970.

Finance

The current funds revenues of institutions of higher education reached an estimated \$128 billion in fiscal year 1989, and current funds expenditures and transfers totaled \$126 billion (table 3). These increases represented changes of 7.2 percent in revenues and 6.4 percent in expenditures over the previous year. Four-year and 2-year institutions showed similar increases of about 7 percent in revenues and around 6 percent in expenditures. Private nonprofit 4-year institutions showed the largest increase in revenues and in expenditures of any sector. Figure 7 and Table 10 provide trend data on higher education finance since 1970.

Survey Methodology

The 1989 data are based on responses from the 642 institutions on the Early Estimates Panel, a stratified random sample representative of the universe of 3,662 institutions of higher education in the United States in academic year 1988-89. Selected data items from the Integrated Postsecondary Education Data System (IPEDS) "Fall Enrollment," "Completions," and "Finance" survey forms were requested by telephone from the Early Estimates Representative of each institution in the sample between mid-October and mid-November 1989. The data were edited in light of previous years' survey responses, where available. The largest discrepancies were resolved with reporting institutions.

The overall response rate for the 1989 "Early Estimates" survey was 98 percent. Weighted response rates for the three survey components were: 1) Fall enrollment, 97 percent, 2) Completions, 96 percent, and 3) Finance, 91 percent. The sample weights were adjusted to account for nonresponse. The sample data were then weighted to national estimates using ratio estimation based on fall 1988 universe data for the "Fall Enrollment" survey and academic year 1987-88 universe data for the "Completions" survey. Since the fiscal year 1987-88 (FY 1988) universe data for the "Finance" survey were not complete, the ratio estimate for the FY 1989 Finance estimates was based on the FY 1987 universe data.

Since the FY 1988 Finance universe data were incomplete, the FY 1988 estimates are based in part on imputed data derived in the following manner. For the Early Estimates sample of institutions, ratios of the FY 1988 to FY 1987 data were calculated for total revenues and total expenditures, by level (4-year and 2-year) and control (public, private nonprofit, and private for-profit). Then, for each institution missing the FY 1988 Finance data, the corresponding FY 1987 data were multiplied by the appropriate level-by-control ratio. The FY 1988 institutional data, including imputations, were then summed to produce the FY 1988 national estimates.

These early estimates are subject to both sampling and nonsampling error. While nonsampling error is difficult to measure, the magnitude of sampling error can be indicated by the confidence interval for an estimate. If all possible samples were surveyed under similar conditions and a 95 percent confidence interval were constructed for each sample, about 95 percent of these intervals would include the true population parameter being estimated (see text table which follows). Data for the universe of postsecondary institutions (of which higher education institutions form a subset) in IPEDS will be available in fall 1990.

Accuracy of selected data from the 1989 "Early Estimates" survey

(In thousands)

Data item	Total	95 percent confidence intervals*		
		Percent	Low	High
1989 fall enrollment	13,487	± 0.8	13,382	13,591
1988-89 degrees (associate and higher)	1,865	± 0.9	1,849	1,882
1988-89 revenues	\$128,277,450	± 1.4	\$126,459,758	\$130,095,141
1988-89 expenditures	\$126,029,009	± 1.3	\$124,381,810	\$127,676,208

*The upper and lower confidence limits shown for each estimate represent the accuracy of these estimates in light of sampling error. Although the actual values of the items are not known for the universe of institutions, the upper and lower limits have been constructed so that the actual values fall between them at the 95 percent confidence level. These margins of error are also presented as a percent of the total estimate in the above "Percent" column.

Acknowledgments

NCES wishes to thank the institutions in the Early Estimates Panel for providing the data on which these estimates are based. All those involved in the data collection, data processing, and report preparation worked quickly to release these early estimates. Preliminary data were reviewed by education association representatives. The author gratefully acknowledges the comments and suggestions of the peer reviewers of the draft report--Joseph Popovich of the Maryland Higher Education Commission; and John Gugel, Thomas Snyder, and George Wade of NCES. Mike Cohen of NCES served as senior statistician on the project. Other NCES staff who contributed to the success of the project are Patricia Brown, Susan Broyles, Judi Carpenter, Kerry Gruber, Austin Lin, Nancy Schantz, and Summer Whitener. The project was completed under the overall supervision of William Freund, Chief, Institutional Studies Branch, and the general direction of Samuel Peng, Director, Postsecondary Education Statistics Division.

-- Not applicable.

*Only percent changes which are noted by an asterisk are statistically different from zero at the 95 percent confidence level. Caution should be exercised when collectively interpreting several percent changes noted by an asterisk. The confidence level that all of the percent changes being considered are statistically different from zero may be less than 95 percent. Percent changes were calculated on actual, not rounded, values.

**Data for private 2-year institutions and private for-profit 4-year institutions are not shown separately because the number of institutions in the sample was small and the standard errors large.

NOTE: Details may not add to totals because of rounding. The 95 percent confidence interval, expressed as a percentage of the total enrollment estimate, is ± 0.8 percent. The confidence level percent for each estimate is available upon request. Postbaccalaureate includes graduate and first-professional enrollment.

Private nonprofit 4-year	41,374,928	44,637,692	*7.9	41,211,023	44,150,843	*7.1
Public 2-year	13,552,076	14,312,597	*5.6	13,261,800	13,912,523	*4.9

*Percent changes which are noted by an asterisk are statistically different from zero at the 95 percent confidence level. Caution should be exercised when collectively interpreting several percent changes noted by an asterisk. The confidence level that all of the percent changes being considered are statistically different from zero may be less than 95 percent. Percent changes were calculated on actual, not rounded, values.

**Estimates for fiscal year 1987-88 were based on preliminary fiscal year 1987-88 data (unimputed) from the Integrated Postsecondary Education Data System (IPEDS) "Finance" survey, with a nonresponse adjustment. (See the Survey Methodology for more information.)

***Data for private 2-year institutions and private for-profit 4-year institutions are not shown separately because the number of institutions in the sample was small and the standard errors large.

NOTE: Details may not add to totals due to rounding. The 95 percent confidence intervals, expressed as a percentage of the total 1988-1989 estimates, are ± 1.4 percent for revenues and ± 1.3 percent for expenditures and transfers. The confidence interval percent for each estimate is available upon request. These data are not directly comparable to the data from previous years presented in other NCES publications, such as the Digest of Education Statistics, from which Pell grant disbursements have been removed. Revenues have traditionally exceeded expenditures primarily because of the time lag in institutions' expenditure of revenues, which may not be in the same fiscal year in which the revenues are received.
